

## **Introduction**

The products on this Registered Product list for Solar Collectors have been tested in accordance with IS EN 12975 (*EN 12975-(1,2):2006 Thermal solar systems and components - Solar collectors - Part 1: General Requirements, Part 2: Test methods*) or with BS EN ISO 9806:2013 (*Solar energy. Solar thermal collectors. Test methods*) and are assumed to be proper materials for the purpose of Part L of the Building Regulations.

However, it should be noted that the dwelling as a whole, incorporating these products, must comply with all Parts of the Building Regulations. Issues of particular relevance where, for example, roof mounted solar panels are fitted may include: weather tightness, fire safety, structural safety etc.

When choosing and installing these products in a particular dwelling, necessary maintenance and access for repair or replacement should be fully considered.

When carrying out works in connection with SEAI grants, installers must adhere to the grants terms and conditions and to the standards and specifications detailed in SEAI's Domestic Technical Standards and Specifications and Better Energy Homes Contractor's Code of Practice, and any additional directions from SEAI. Documents and information can be found in the [Contractor Support](#) section of the SEAI Website.

Irish guidelines (**SR 50-2:2012 Building services Code of practice Part 2: Thermal solar systems**) have been developed on the design, installation and commissioning issues relating to solar heating systems. These guidelines are intended to assist providers and specifiers of solar water heating systems in the interpretation of the requirements (not directly addressed by Part L of the Building Regulations) and to provide guidance as to how the requirements should be addressed. The guidelines are currently available from NSAI.

The emphasis, in the guidelines, is placed on general principles and not on detailed aspects of particular systems. Third party certification bodies e.g. NSAI/IAB are available to assess compliance of particular systems with all parts of the Building Regulations.

**SEAI shall bear no responsibility for the quality, specification or standard of the product or its suitability for the dwelling in which it is installed, nor does SEAI bear any responsibility for the qualification or performance of the installer. The fact of registration on this Registered Product List does not infer any warranty or endorsement of that product by SEAI nor does the fact of registration on the Registered Installer List infer warranty or endorsement of the installer.**
