Greyhound Racing Ireland HQ

HEATING & LIGHTING

The main measures implemented were:

- Reduced internal space heating temperature to the minimum recommended temperatures for heating.
- Optimised water heating.
- Reduced unnecessary use of lighting.
- Adopted new operational control conditions to minimise/switch-off heating, hot water and lighting outside occupied hours.

STAFF ENGAGEMENT

- Ample use made of the RYU campaign materials including posters, email templates and Booster activities (see *Energy use highlighting* on right).
- A staff suggestion scheme was set up to encourage and track energy saving ideas. These were logged on a Register of Opportunities and implemented where appropriate.
- Mandatory energy efficiency training for all new employees as part of the induction process.
- The RCÉ is committed to sustainable travel, and its Head Office has achieved the Smarter Travel Mark Bronze level award.

ASSESSMENT AND TRACKING

- Facility Teams have undertaken an Operations and Maintenance Audit, assuring condition, settings and upkeep of plant.
- Energy use was highlighted during Internal Stadium Audits, comparing it to similar stadia, and establishing Energy Performance Indicators based on the number of attendees per stadium. This approach helped in understanding and optimising energy usage across different stadia.
