1. Executive Summary

This is the third annual report on the energy efficiency performance of public bodies in Ireland. It is set in the context of Ireland's EU and national commitments and wider climate change goals, whereby a target of 33% energy efficiency improvement is to be achieved by all Irish public bodies by 2020.

Energy efficiency continues to be a national imperative driven by the multiple challenges of the need for security of energy supply, dealing with fluctuating energy costs and addressing global climate change. The 2015 energy white paper, *Ireland's Transition to a Low Carbon Energy Future*, emphasised how energy efficiency will be at the centre of a transition to a clean, low carbon energy system by 2050.

Public bodies are required to report annual energy efficiency data to the Sustainable Energy Authority of Ireland (SEAI) which manages the reporting process on behalf of the Department of Communications, Climate Action and Environment¹ (DCCAE). The definition of 'public bodies' in Ireland is broad and includes the civil service, local authorities, non-commercial state bodies/agencies, commercial state bodies, public health, justice and defence and educational bodies.

Approximately 96% of all public bodies are now using the online national energy monitoring and reporting (M&R) system established by SEAI and DCCAE, in addition to half of

all schools. The monitoring and reporting system provides an important record of how the public sector performed in 2015.

The key findings for 2015 show overall improvements, for the second year running, in both the numbers of public bodies reporting and the total energy efficiencies achieved. The detailed data in this report for 2015 cannot, however, be compared on a like for like basis to the data for 2014 as the overall number of public bodies and schools reporting has increased significantly.

- For 2015, 350 public bodies were requested to report data to SEAI, of which 337² submitted complete reports by the reporting deadline.
- In addition, 3,732 standalone schools were requested to report data, of which 1,792³ submitted complete reports.

This report comprises an analysis of the data submitted by these organisations on annual energy consumption, annual energy spend, energy savings achieved and energy efficiency performance in 2015 against 2020 targets.

Efficiency gains have been achieved through implementation of thousands of diverse projects, ranging from structured energy management, building and facility upgrades, retrofits, changes in transportation, better energy procurement and through behavioural change in organisations.

Current Position

¹ Reporting by public bodies in Ireland is required under Regulation 5(4) of SI 426 2014. The number of public bodies that are required to report may change each year due to organisational changes in line with government policy and legislation.

^{2 345} public bodies attempted to submit reports but data for some of these was incomplete and is not included in this report.

An additional 121 schools attempted to submit reports but their data was incomplete and is not included in this report.

Key findings from the analysis of the data reported by 337 public bodies and 1,792 schools for 2015:

- Their combined total primary energy consumption was 9,343 GWh and their total energy spend was €588 million.
- This is estimated to represent 89% of the energy consumption of the sector.
- Annual primary energy savings of 2,442 GWh were achieved, which is equivalent to 548,000 tonnes of CO₂ savings.
- These savings amount to a 21% improvement on business as usual, representing €154 million in cost savings for the sector in 2015.

While the level of reporting by public sector organisations is very strong in terms of compliance from the sector, the aim is that all public bodies' consumption, including that of all schools, will be reported in future years. The compliance rate in 2015 for public bodies was 96%, excluding schools. The compliance rate for schools of 48% is almost twice that of last year. It is considered a good response given the technical complexity of the data requirements.

Overall, the energy performance reported is strong, at 21% improvement by 2015. However there are still significant challenges ahead for public bodies to maintain this course of action and sustain continuous improvements in energy efficiency to meet the 2020 targets. The annual M&R process is an enabling tool, providing public bodies with information that enables strategic decision-making towards the 2020 target.

In 2015, improvements were made in both the numbers of bodies reporting and the total energy efficiencies achieved

In 2015, public bodies avoided energy use equating to €154 million

Key Findings

FOR 2015, THE SAVINGS ACHIEVED WERE:

2. Background and Context

2.1 Policy and Legislative Requirements

The Energy Efficiency Directive (EED) (2012/27/EU)⁴ sets out the policy roadmap for the period to 2020 and brings forward legally binding measures to intensify Member States' efforts to use energy more efficiently at all stages of the energy supply chain. The EU 2030 Climate and Energy Framework sets out headline targets for the EU for 2030 of at least a 40% reduction in greenhouse gas emissions (from 1990 levels) and increases in energy efficiency and renewable energy to 27%.

In Ireland, the National Energy Efficiency Action Plan (NEEAP) sets out several obligations on public bodies to lead the way in relation to energy efficiency, stating 'The public sector will improve its energy efficiency by 33% and will be seen to lead by example — showing all sectors what is possible through strong, committed action'.

SEAI, on behalf of DCCAE, established the M&R system to enable public bodies to track their energy efficiency performance towards the 2020 targets.

This M&R system is based on the groundwork put in place since 2009 by SEAI to enable the public sector to meet their energy efficiency reporting requirements. This is illustrated in Figure 1.

FIG. 1: ENABLING M&R BY PUBLIC BODIES

2.2 The Monitoring and Reporting (M&R) Process

Since 2010, public bodies have been required by Irish statute to report on their energy usage and actions taken to reduce consumption. There are two key obligations for public bodies:

- Requirement to report energy management and performance data directly to SEAI each year in order to track progress towards the 2020 target;
- ii. Requirement to publish an annual statement on energy performance. This statement must describe "the actions it is taking, or has taken, to improve its energy efficiency and an assessment of the energy savings arising from those actions".

The reporting methodology is illustrated below in Figure 2. A more detailed description is in Appendix 1.

There are two key concepts applied:

- a) Application of activity metrics so that fluctuations in an organisation's level of activity that have an impact on energy **consumption** are taken into account in determining performance, and
- b) Tracking energy performance and energy efficiency against a **baseline** so annual improvements can be assessed.

Energy efficiency improvements therefore can be assessed against a 'business as usual' scenario, and take into account organisational or infrastructural changes that impact on the energy requirements of the public body.

2.3 Transition to Irish Water

Up to the end of 2013, local authorities were responsible for the provision of public water services, which accounted for approximately 40% of their combined energy consumption. In January 2014, the water services assets transferred to Irish Water. In consultation with local authorities and Irish Water, SEAI developed an approach to track the energy performance of the sector before, during and after this transition. The key elements of this approach are:

- All savings made by local authorities arising from water services up to the end of 2013 have been 'locked in' and will be retained by local authorities for the purposes of tracking their progress against the 2020 target.
- The water services sector must improve its energy performance by 33% by 2020. The sector had made savings of 6% (provisional) up to and including 2013.

Data for local authorities and Irish Water is included within the same sub-sector breakdown in this report.

FIG. 2: HOW PUBLIC BODIES REPORT

Public Bodies must report CONSUMPTION **VALIDATE** their energy consumption **Report consumption for Data verification** annually for the previous year all fuel types: electricity, assessment of measured against a baseline thermal fuel, transport fuel submissions by SEAI **BASELINE** Choose baseline and report data through an annual cycle **ANNUAL DEMAND Measure what Receive scorecard on** A defined 6 month reporting window during which public drives demand savings performance for the year and for bodies must report 2020 target

2.4 Analysis of Reporting by Public Bodies

In Ireland the definition of 'public bodies' is broad and encompasses a wide range of organisations, including the civil service, local authorities, non-commercial state bodies/ agencies, commercial state bodies, public health, justice and defence and educational bodies.

In 2015 **350**⁵ **public bodies and 3,732 standalone schools** were requested to report data to SEAI through the 2015 reporting cycle.⁶

The public bodies and schools that were requested to report during the 2015 reporting cycle are broken down as follows:

- 350 public bodies, including 16 Education & Training Boards (ETBs), were requested to report data directly to SEAI using the reporting system. The 270 schools under the aegis of the ETBs were requested to report via their ETBs.
- Another 3,732 schools were requested to report directly as standalone entities.

By the reporting deadline, 345⁷ public bodies and 1,913 standalone schools had made submissions to SEAI. Some of these submissions were not fully complete and are not taken into account in the analysis of the data presented in this report. The data presented in this report is an analysis of 337 complete submissions from public bodies and 1,792 from standalone schools.

The 337 complete submissions made by public bodies represents a compliance rate of 96%. SEAI estimates that the consumption of all of the organisations that reported represents over 89% of total public sector energy consumption.

Figure 3 shows the number of complete reports submitted from each sub-sector as a proportion of the total number of organisations in each sub-sector.

The consumption of the organisations that reported represents over 89% of total public sector energy consumption

⁵ The number of public bodies that are required to report in Ireland may change each year due to organisational changes in line with government policy and legislation e.g. in 2015 the National Roads Authority and the Railway Procurement Agency merged to become Transport Infrastructure Ireland.

In addition, a further 10 public bodies and 7 schools were requested to report but were subsequently excused from reporting as standalone entities.

⁷ This figure includes 3rd level institutions and ETBs, but excludes standalone schools.

3. Analysis of Primary Energy Consumption and Energy Spend

The data presented in section 3 is based on the complete reports submitted by 337 public bodies and 1,792 schools.8

3.1 Total Energy Consumption

The total primary energy consumption reported for 2015 was 9,343 GWh.

The sectoral breakdown of this total is shown in Figure 4.

Total

3.2 Total Energy Spend

In 2015 the total public sector energy spend was €588 million.

The sectoral breakdown of this total spend is shown in Figure 5.

9,343

3.3 Total Energy Consumption by Fuel Type

The breakdown of the 9,343 GWh of energy consumption reported for 2015 between electrical, heating (thermal) and transport is illustrated in Figure 6. The thermal and transport subtotals are broken down by fuel type in Figures 6A and 6B.

217

5,027

The consumption patterns in the sub-sectors are illustrated in Figure 7.

	Electricity GWh	Thermal GWh	Transport GWh
Civil Service	228	94	13
Commercial State Body	916	194	1,394
Education (excl. Schools & ETBs)	507	344	7
Health	846	915	80
Justice & Defence	239	162	220
Local Authorities & Water Services	1,736	285	239
Non-commercial State Body / State Agency	262	77	40
Schools & ETBs	294	251	2
Total	5,027	2,322	1,993

3.4 Electricity Consumption

The total electrical consumption is 5,027 GWh and is broken down in Figure 8.

Unknown

Total

3.5 Natural Gas Consumption

The total natural gas consumption is 1,676 GWh and is broken down in Figure 9.

10 public bodies account for 49% of total consumption

3.6 Main Energy Consumers

Altogether, the total primary energy consumption in 2015 of the ten largest energy consumers was 4,596 GWh, which accounts for 49% of total reported consumption. The 100 largest energy consumers that reported account for 88% of the total reported primary energy consumption.

It is likely that improvements by the top 50 energy consumers (which account for 77% of energy consumption) will largely determine if the 33% target will be met by the sector by 2020.

The 10 largest energy consumers that reported for 2015 are set out in alphabetical order below.

- An Garda Síochána
- An Post
- Bus Éireann
- Coillte Teoranta
- Defence Forces
- Dublin Bus
- Dublin City Council
- HSE
- larnród Éireann / Irish Rail
- Irish Water

4. Analysis of Energy Savings Achieved and Performance

4.1 Total Public Sector Primary Energy Savings (GWh) and Performance

The combined savings in 2015 of the public bodies and schools that submitted complete reports is 2,442 GWh⁹ of primary energy, as illustrated in Figure 11. This amount is equivalent to a 21% improvement compared to what the business-as-usual energy consumption would have been had these organisations maintained their baseline efficiency levels¹⁰. This is the primary indicator used for tracking the sector's progress towards the 33% target. Based on 2015 data, a 33% improvement would be equivalent to 3,910 GWh of primary energy savings.

The 2,442 GWh of annual energy savings are equivalent to 548,000 tonnes of annual CO₂ savings.

The cumulative avoided CO_2 emissions (up to 2015) since their baselines reported by the public bodies and schools that submitted complete reports amount to 2,174,000 tonnes.

548,000 tonnes

THE 2,442 GWH OF ANNUAL ENERGY SAVINGS ARE EQUIVALENT TO 548,000 TONNES OF ANNUAL CO₂ SAVINGS

⁹ Calculated by subtracting each organisation's actual 2015 energy consumption from its business-as-usual energy consumption. The business-as-usual energy consumption is the amount that each public body would have consumed in 2015 had it not made the reported efficiency gains since its baseline.

¹⁰ The calculation of these results incorporates adjustments to the business-as-usual consumption for local authorities to account for the transition of water services to Irish Water.

The analysis of the performance of the 337 public bodies (excluding standalone schools) that reported shows that:

- 48% are more efficient than their baseline and are on track for their 2020 target. (Aggregate 2015 savings of 1,907 GWh, which is equivalent to 427,000 tonnes of CO₂)
- **34%** are more efficient than their baseline but are not yet on the path to the 2020 target. (Aggregate 2015 savings of 565 GWh, which is equivalent to 128,000 tonnes of CO₂)
- 18% are less efficient than their baseline. (Aggregate 2015 deterioration in performance of 53 GWh, which is equivalent to 12,000 tonnes of CO₂)

Of the public bodies that reported, **82% have made improvements on their baseline**. Taking both the savings and deteriorations into account, overall improvement for the public bodies is 2,442 GWh. This is equivalent to 548,000 tonnes of CO₂.

The distribution of the performance results is shown in Figure 12.

2015 Performance (all sectors)	No. Public Bodies	No. Stand- alone Schools	Total No.
>40% improvement	38	75	113
30-40% improvement	36	89	125
20-30% improvement	74	180	254
10-20% improvement	83	331	414
0-10% improvement	46	427	473
Deterioration in performance	60	690	750
Total	337	1,792	2,129

The graph in Figure 13 tracks how the total savings achieved in each year since 2009 compare to the 2020 target.

In addition to the energy efficiency improvements achieved, the absolute level of energy consumption has also improved over time. The 337 public bodies and 1,792 schools that reported data consumed **1,232 GWh** less primary energy in 2015 than they did in their baselines.

1,573

1,968

2,442

2011

2012

2013

2014

2015

4.2 Analysis of Total and Cumulative Public Sector Energy Savings (€)

The value of the **energy savings** reported for 2015 is **€154 million**. As the total spend in 2015 for all of the organisations that reported data is €588 million, this represents a saving of 26% in energy costs attributable to energy efficiency improvements.

The value of the cumulative energy savings (up to 2015) since their baselines reported by the public bodies and schools that submitted complete reports is €619 million.

4.3 Sub-sector Primary Energy Savings (GWh)

The breakdown of savings in primary energy (GWh) and percentage improvement on 'business as usual' (BAU) by subsector is set out in the table in Figure 14. The equivalent ${\rm CO_2}$ savings are also identified.

The bar chart in Figure 14 illustrates percentage savings for each sub-sector.

	GWh	% Improvement on BAU	Tonnes (000s)
Civil Service	104	24%	23
Commercial State Body	799	24%	186
Education (excl. Schools and ETBs)	318	27%	69
Health	504	22%	111
Justice & Defence	89	13%	20
Local Authorities & Water Services	460	19%	103
Non- commercial State Body / State Agency	116	23%	25
Schools& ETBs	52	9%	11
Total	2,442	21%	548

Making Progress

The reports submitted this year demonstrate energy efficiency improvements achieved through the implementation of thousands of individual efficiency measures as part of an overall drive for energy efficiency by public sector organisations. Over half of the measures reported addressed lighting, heating, building fabric and structured energy management improvements. Other areas targeted were ICT systems, on-site renewables and control optimisation.

The projects illustrated on these pages are a selection of over 2,400 projects and measures that the public sector has reported to SEAI in 2015 and are representative of the diverse range of energy efficiency improvements which have been implemented across the country. While the overall level of project reporting has improved, many of the efficiency measures are individually of a small scale. Organisations will need to become more proactive in both undertaking energy efficiency projects of scale, and reporting on them, so that other public bodies can benefit from their experience.

Note: Case study savings are total final consumption, all other figures in the report are primary energy consumption

1,191,980 kWh

The DAA has completed a deep retrofit of the old Aer Lingus Head Office building, now Dublin Airport Central (DAC) One, at Dublin Airport, designed to LEED Platinum standard. The building has been completely refurbished to exceed building regulations with façade upgrades, new boilers and efficient heating ventilation and air conditioning system selection, which together with a fully integrated BMS, combine to achieve a potential 80% saving over the building's baseline energy consumption.

Dublin Airport Authority (DAA)

Letterkenny Institute of
Technology has reduced its
electrical energy consumption
by 63,600 kWh (equivalent to
32 tonnes CO₂) within its data
centres on the Letterkenny
and Killybegs campuses,
through server consolidation
with virtualization technology.
Virtualizations allow for fewer
physical servers, meaning lower
power usage and reduced
cooling requirements in the
data centres. Rationalisation of
the servers also facilitated the
de-commissioning of a server
room.

Letterkenny Institute of Technology

€40,500

In 2015 Galway City Council upgraded a total of 400 street lights to best available technology LEDs. This project included the replacement of all mercury lamps and all other 400 W and 600 W lamps on the city network, together with the commencement of upgrades on a cluster basis. The project has resulted in annual energy savings of 253,000 kWh, equivalent to 124 tonnes of CO₂ and has reduced the City Council's annual electricity costs by €40,500.

Galway City Council

The Office of the Director of Corporate Enforcement is the lead tenant in a 15-year-old, five-storey-over-basement office building. Together with four other tenants, it established a Green Team in 2014, in response to the OPW 'Optimising Power @ Work' programme, to implement an energy management plan. This has delivered a total of 419,000 kWh of energy savings since 2012. Through a variety of measures, including reducing hot water consumption, reviewing heating and air-conditioning settings, and holding energy-saving workshops for staff, the tenants have lowered the building's energy consumption by 28%. In 2014 the building won an OP@W award in the air-conditioned building category.

Office of the Director of Corporate Enforcement, Dublin

16,220 kWh

Existing metal halide lights in the main pool hall in Nenagh Leisure Centre, which is operated by Tipperary County Council, were upgraded to LED fittings with an expected service life of 12 years. The installation has resulted in savings of 16,220 kWh per annum or a 3.5% reduction in energy consumption and is saving the County Council over €2,750 on annual running costs. The CO₂ saving equivalent from the project is 9 tonnes.

Tipperary County Council

1 20%

With the assistance of its SEAI energy advisor, this recently-built primary school has been able to reduce energy consumption by 20% when compared with the same period in 2014, through low-cost and no-cost measures. Behavioural change programmes and optimisation of existing heating and lighting systems contributed to a reduction of 22,290 kWh in energy consumption, equivalent to 5.8 tonnes of CO₂ and saving the school over €1,845.

Gaelscoil Chaladh an Treoigh, Limerick

University College Dublin carried out LED lighting upgrades in the Architecture and Planning buildings at its Richview campus, which together with smart lighting controls, have delivered campus electrical savings of 15%, in addition to improving aesthetics and light quality in the studios. An inefficient oil boiler was also replaced with a high efficiency condensing boiler which has resulted in significant comfort improvements and reduced gas usage by 14%. The project has reduced annual energy costs by €13,800.

University College Dublin

€19,200

The ESB depot building in Inchicore is a typical example of the ESB's older building stock in need of modernisation and energy saving upgrades. Heat losses through the exterior façade were addressed with high performance triple-glazed windows combined with 100 mm external wall insulation and 150 mm roof insulation. The energy performance rating of the depot has been upgraded from BER G to BER C3. In addition to noticeably improving staff comfort levels, the energy savings of 105,775 kWh are worth up to €19,200 annually.

Electricity Supply Board (ESB), Dublin

5. Towards 2020

5.1 Sub-sectoral Performance

The analysis of the data reported by 337 public bodies and 1,792 schools shows that the annual energy efficiency savings at 2015 represents an overall efficiency gain of 21%.

Notwithstanding this strong result, there are significant challenges ahead for public bodies to maintain this course of action and sustain continuous improvements towards 2020.

Figure 15 illustrates the 2015 position of each sub-sector with respect to the target.

The annual energy efficiency savings to date have been steady with 21% achieved. However, achieving the remaining 12% is likely to be more challenging

FIG. 15: SECTORAL PERFORMANCE AGAINST 2020 NEEAP TARGET

A collective effort across all sub-sectors will be required to meet our 2020 obligations. The M&R performance measurement system enables every organisation – regardless of its level of energy consumption – to analyse the gap to target and design strategic interventions in energy efficiency that will have the most significant impact for it.

The public sector organisations that were requested to submit reports are detailed in the following section 5.2.

5.2 Performance of Public Bodies

SEAI recognises that building a complete energy profile for organisations is an iterative process that will take time as public bodies are in a better position to submit improved data each year. This work is ongoing and 2015 saw a significant increase in the numbers of public bodies that submitted complete reports. Also, following the initial roll-out of the system to schools in 2014, there are now 1,792 schools that submitted complete reports.

SEAI continues to work with public bodies and schools to improve the quality of their data through the provision of guidance materials, training and bespoke support services.

The public bodies and schools are listed in three categories as follows:

Public Bodies (excluding schools)

The 337¹¹ non-school public bodies that made a complete submission to SEAI by the deadline are alphabetically listed in three groups according to their level of energy consumption as follows:

- Group 1: Energy consumption greater than 50 GWh
 This includes 35 public sector organisations which
 - This includes 35 public sector organisations which account for 71% of total reported energy consumption.
- Group 2: Energy consumption of between 5 and 50 GWh

This includes 127 public bodies which account for 23% of total reported energy consumption.

Group 3: Energy consumption less than or equal to 5 GWh

This includes 175 public bodies which account for 2% of total reported energy consumption.

Standalone schools

The 1,792 standalone schools that made complete submissions to SEAI by the deadline, accounting for 4% of total reported energy consumption, are listed alphabetically by county.

Non-reporting Public Bodies

The public bodies that did not report are listed alphabetically.

5.2.1 Public Bodies (excluding schools)

GROUP 1 PUBLIC BODIES: ENERGY CONSUMPTION GREATER THAN 50 GWh

Public Body	Overall Status (2015)	Energy Savings Since Baseline
		%
An Garda Síochána	•	17.5%
An Post	2	7.1%

The overall status of energy efficiency improvement on baseline for 2015 is illustrated as follows:

More efficient than baseline and on track for 2020 target

More efficient than baseline, but not yet on the path for 2020 target

Less efficient than baseline

Public body submitted sufficient data to calculate a savings result for 2015; however the result lies beyond the expected range of probable energy performance and needs verification.

Aspects of the reported data to be addressed to improve data quality and verification.

Note 3

Each local authority's result includes the performance of water services assets up to and including 2013, but excludes water services since then. The savings figure is provisional and may be revised in future years as the local authorities, Irish Water and SEAI continue to work together to improve the quality and quantity of energy data, including historical data.

5.2.2 Standalone schools

SEAI would like to extend its thanks to the following 1,792 schools, listed alphabetically by county that made complete submissions by the reporting deadline.

Schools under the aegis of Education and Training Boards (ETBs) report their data via their parent ETBs. Individual ETB schools are not listed here. The ETBs are listed in section 5.2.1.

5.2.3 Non-reporting Public Bodies

The number of public bodies that are required to report in their own right changes from year to year due to organisational changes within the sector. Some smaller organisations that were requested to report for 2015 did not report data in their own right, but their data was reported via 'parent' organisations, while others may no longer come under the definition of a public body, as set out in SI 426 of 2014. Such organisations are not listed here. These organisational changes are the subject of continual review by SEAI.

Alzheimer Society of Ireland
An Foras Teanga - Foras na Gaeilge
Cheshire Ireland
Donegal Education & Training Board
Forensic Science Laboratory
Grangegorman Development Agency
New Ross Port Company
Nua Healthcare Services
Professional Development Service for Teachers
Regulator of the National Lottery
Residential Tenancies Board
State Examinations Commission
Valuation Tribunal

Appendix 1 – Reporting Methodology

The key principles of the reporting methodology are:

- Individual public bodies report annually for the previous year. There is a defined reporting window during which public bodies must report and the cycle repeats annually.
- Public bodies report all of their energy consumption for all fuel types (electricity, thermal fuels and transport fuels) at an organisational level.
- Public bodies report baseline data on a once off basis.
- Public bodies then report their energy consumption annually for the previous year.
- For electricity & natural gas, all public bodies have to do is submit their meter numbers once to the SEAI (MPRNs & GPRNs) and then validate them annually. SEAI accesses the energy consumption data corresponding to these meter numbers directly from the regulated meter operators (ESB MRSO and Gas Networks Ireland) each year.
- For all non-network connected energy sources (e.g. heating oils, LPG, solid fuels, diesel), public bodies selfreport their consumption subtotals directly to the SEAI.
- Each year, public bodies must self-report an activity metric that best corresponds with their energy usage.

The next reporting cycle will commence in November 2016. All public bodies will be required to report their 2016 consumption before the cycle ends in late April 2017; they will also have opportunity to review/edit their previously reported data.

Measuring Energy Savings

In order to quantify energy savings, changes in given parameters that are related to energy use must be measured. The SEAI system uses energy performance indicators (EnPIs) to measure each organisation's energy performance. This enables organisations to determine how efficiently they are using energy because it accounts for changes in the activity level related to the energy use – or 'activity metric' – of each organisation.

Each year, an EnPI is calculated by dividing the organisation's total primary energy requirement (TPER) by an activity metric.

The primary indicator for tracking each organisation's energy savings is the change in the organisation's EnPl each year and is expressed as a percentage savings between a baseline period and the current year (i.e. 2015). This is a workable methodology which accounts for an organisation's energy performance as well as its energy consumption and enables public bodies to determine if energy is being used efficiently or not in accordance with the definitions of 'energy efficiency' and 'energy savings' used by the European Commission.

Baselines and Verification

The progress made by an organisation in meeting its 2020 target is measured against a historical baseline. There are three alternative baseline periods. Public bodies can choose whichever of the following baseline periods suits them best: 2001-2005 (averaged); 2006-2008 (averaged); 2009 (single year). 2009 is the default baseline.

Data Verification

The validity of submitted data is checked in two ways:

- Automated Data Verification Assessment (DVA), which consists of validation rules built into the reporting software to check for errors when entering inputs.
- DVAs undertaken by SEAI-appointed assessors, which entail assessments of specific aspects of submissions.
 A DVA of a public body's submission consists of direct interaction(s) between an SEAI assessor and the public body to verify that the data submitted falls within certain acceptability criteria.

The purpose of the data verification system is threefold:

- Ensure, insofar as practical, that the data which is submitted is robust and verifiable;
- Provide an incentive for organisations to submit accurate data;
- Provide a means for supporting organisations in improving how they gather and submit M&R data and for providing feedback on the M&R system.

The data verification process on the 2015 data involved an assessment of 28% of public bodies.

Appendix 2 - Glossary

Activity Metric

A measure of the activity that a public body undertakes. Ideally, the activity metric should quantify the key activities that affect energy use, e.g. for organisations in which most of the energy consumption is in buildings, good activity metrics are: the total useful floor area that is heated or air conditioned; the number of people that benefit from the energy service provided (e.g. number of employees for office-based organisations, number of students for universities etc.)

Baseline

The period from which an organisation's progress towards the 2020 target is tracked. There are three alternative baselines. Public bodies can choose whichever one suits them best: 2001-2005 (averaged); 2006-2008 (averaged); 2009 (single year). 2009 is the default baseline.

BMS

Building management systems or building energy management systems provide control and monitoring of energy services. With efficient control of energy using plant and equipment, running and maintenance costs can be reduced and comfort levels maintained. Systems can be set up to monitor and report on energy usage, costs and billing.

FnPl

Energy Performance Indicator. (EnPI) is a way of measuring an organisation's energy performance. Each year, an EnPI is calculated by dividing the organisation's total primary energy requirement (TPER) by an activity metric.

GPRN

Gas Point Registration Number is a unique reference number assigned to every gas point on the natural gas network.

LEED

LEED is a national certification system developed by the U.S. Green Building Council to encourage the construction of energy and resource-efficient buildings that are healthy to live in.

MPRN

Meter Point Reference Number is a unique 11-digit number assigned to every single electricity connection and meter in the country.

Public Body

For the purposes of the NEEAP target, public bodies are considered to encompass the Civil Service, commercial and non-commercial State Bodies, State-owned financial institutions, the Defence Forces, An Garda Síochána, Health Service Executive hospitals and other facilities, Local and Regional Authorities, schools and universities.

Thermal Fuels / Thermal Energy

For the purposes of this report, thermal fuels (thermal energy) comprise all solid, liquid and gas fuels used for non-transport purposes. This includes both fossil and renewable fuels used in boilers, space & process heating systems, catering, fuel based electricity generators (on site), CHP and in all plant, equipment & other non-road-mobile vehicles.

TPER

Total Primary Energy Requirement (TPER), or primary energy, is a measure of all of the energy consumed by the organisation, which accounts for the energy that is consumed and/or lost in transformation, transmission and distribution processes. TPER is calculated by applying published conversion factors to each element of the organisation's energy consumption. The conversion factors can vary from year to year and the factor for electricity is typically at least twice the value of those for thermal and transport fuel types.

Conversion factors for each year are available on the Frequently Asked Questions section of SEAl's website http://www.seai.ie/Your_Business/Public_Sector/FAQ/Calculating_Savings_Tracking_Progress/What_are_the_conversion_factors_used_to_calculate_TPER.html

Transport Fuel

For the purposes of this report, transport fuels comprise all liquid fuels used for transport vehicles (road, rail, air, water). This includes both fossil and renewable fuels. The electricity used for transport (rail, electric vehicles) is included within the electricity totals in this report, although an electricity-fortransport subtotal is broken out in Figure 8.
